This table summarizes Tom Roster's analyses to date of the lethality data bases for certain of the 16 U.S. steel vs lead waterfowl & dove shooting tests published between 1988 & 2014 & one steel-only pheasant shooting test (1995) plus lethality data bases owned by ammunition companies for birds taken with nontoxic shotgun loads Roster tested for them & the CONEPOG. Note: Steel #BBB (1.90") & HEVI-Shot #2 (1.50") have exhibited the best all-around performance for taking geese; steel #2 (1.45") & HEVI-Shot #4 (1.30") the best all-around performance for taking ducks; steel #2 & HEVI-Shot #4 (1.30") the best all-around performance for taking ring-necked pheasants; & steel 7½ (1.00") the best all-around performance for taking doves.

[^1]: These findings are derived from testing 2½” 28 gauge; 3½” 20 ga.; 3½” .410 ga.; & 3½” 10 ga. steel loads; plus 2½” 28 ga.; 3½” .410 ga.; and 3½” 12 ga. HEVI-Shot loads.

Biologists, doctors and researchers from the science community in 2013 released a consensus statement stating the following: Lead is one of the most well-studied of all anthropogenic toxins and there is overwhelming scientific evidence demonstrating that there is no safe level of lead exposure for children; and

Lead-based ammunition is likely the greatest, largely unregulated source of lead knowingly discharged into the environment in the United States; and

The discharge of lead-based ammunition and accumulation of spent lead-based ammunition in the environment poses significant health risks to humans and wildlife; and

Lead-based ammunition is a significant source of lead exposure in humans that ingest wild game, and people consuming meat shot with lead-based ammunition have been shown to have lead pellets/fragments in the gastrointestinal tract; and

Lead poisoning from ingestion of spent lead-based ammunition fragments poses a serious and significant threat to wildlife, including wild scavenging species such as the bald eagle, golden eagle, ravens and turkey vultures.

Given the overwhelming evidence for the toxic effects of lead in humans and wildlife, even at very low exposure levels, convincing data that the discharge of lead-based ammunition into the environment poses significant risks of lead exposure to humans and wildlife, and the availability of non-lead alternative products for hunting, the Tribal Council of the Sisseton-Wahpeton Oyate of the Lake Traverse Reservation supports the efforts of the Sisseton-Wahpeton Oyate Fish and Wildlife Department (Tribal Council Resolution No. ) to reduce or prohibit the use of lead-based ammunition for the take of wildlife on trust lands.

We are asking that all hunters please voluntarily use non lead products for hunting of species that are not yet required by law to be steel shot only. Inquire with the Sisseton Wahpeton Sioux Tribe Fish & Wildlife Department for alternative lead shot recommendations.
